What Do We Know and What Should We Do About Tax Justice?
Alex Cobham

This book lays out what we know about the scale, history and impacts of tax abuse. From profit-shifting by multinational corporations to the exploitation of offshore tax havens. It sheds light on the people and organisations that enable tax abuse, and the stark social inequalities it creates. Crucially, it also explores what we can do about it. What are the practical realities of challenging the threats of tax injustice and of holding abusers accountable? What are the policies and institutional shifts we need to see and fight for? It is estimated that cross-border tax abuse accounts for around half a trillion dollars of lost revenue around the world each year. This is important. Alex Cobham shows us that tax is more than just business regulation or economic policy. It is a powerful tool for creating a fair and just society. It is our social superpower.

Bad at Math?
Dismantling Harmful Beliefs That Hinder Equitable Mathematics Education
Lidia Gonzalez
Math really is for everyone—so let’s prove it. You’ve heard it from kids, from friends, and from celebrities: “I’m bad at math.” It’s a line that society tends to accept without examination—after all, some people just aren’t “math people,” right? Wrong. As we do with other essential skills, we need to expose the stereotypes, challenge the negative mindsets, and finally confront the systemic opportunity gaps in math education, and replace them with a new vision for what math is, who it’s for, and who can excel at it. Both social commentary and a toolkit of solutions, this bold new book directly challenges the constructs that have historically dictated our perceptions of what makes someone a “math person”. Only by dismantling those misplaced assumptions can we reform math education so it works for everyone. Because in truth, we are all math people.

Breaking Down the Monolingual Wall
Essential Shifts for Multilingual Learners’ Success
Ivannia Soto | Sydney Snyder | Margarita Espino Calderón | Margo Gottlieb | Andrea Honigsfeld

Your guide to culturally and linguistically sustaining practices in your dual language classroom and school. It's time to set the record straight: Multilingualism is a tremendous asset that must be nurtured and valued and the most effective pathway to multilingualism is dual language education. Despite significant evidence attesting to the cognitive, social/emotional, and economic benefits of multilingualism, the majority of our classrooms and schools are monolingual. Encouragingly, recent shifts in state policies have increased the demand for dual language programming in our schools. This increased momentum brings new challenges, including the need for more bilingually authorized teachers, high-quality instructional resources, and accurate assessment and accountability in the target languages of instruction. With contributions from ten experts in multilingual education, Breaking Down the Monolingual Wall outlines the systemic and pedagogical approaches necessary for successful multilingual and dual language programs.

Improving Quality in Healthcare
Questioning the Work for Effective Change
Murray Anderson-Wallace | Nick Downham

This book is for anyone who is interested in improving quality in healthcare. It will appeal to those who are traditionally responsible for quality matters, as well as practicing clinicians and leaders. Unusually, it will also be as relevant to those who have the keenest interest in the quality of care - interested citizens. It is a deliberate antidote to the anti-intellectual, QI tool driven, mechanistic approach that still dominates much of healthcare quality improvement work. The authors - both of whom have extensive experience of working in and around quality issues in healthcare at a national, regional and local level – challenge such approaches, which they believe fail to take account of patient and organisational context and invite reductionism, cherry picking, atomisation of complex issues, leading ultimately to simplistic and unsustainable outcomes.

Digital Culture and Society
Kate Orton-Johnson
This book provides a critical introduction to the ways in which digital technologies have enabled new types of interactions, experiences and collaborations across a range of platforms and media, profoundly shaping our socio-cultural landscapes. These discussions are grounded in classical sociological concepts; community, the self, gender, consumption, power and exclusion and inequality, to demonstrate the continuities that exist between sociological studies of ‘real’ world phenomena and their digital counterparts. Examining the various debates around methods in digital sociology in recent years, this book provides an accessible and engaging guide to using methodologies to study digital technology. From the moment we wake up until we go to bed, many of us constantly use digital technologies. Our mobile phones have become our maps, banks, newspapers and entertainment consoles. What’s more, they allow us to be constantly connected with the people in our lives. This book will equip you to analyse digital media in your own work.

Colonised Minds
Narratives that Shape Psychology

Akira O’Connor | Erin Robbins

Psychology, as it is taught in the Global North, strives to be an objective science beyond reproach, but what happens when we examine the discipline critically, through an anti-colonial lens? This text pulls back the curtain on the existing canon to reveal the historical power structures that shaped the discipline, and examines the extent to which psychology today continues to uphold oppression. Colonised Minds situates current teaching and research of major topics in the field of psychology within the context of colonialism to better understand how some ideas were allowed to flourish while others were suppressed, censored, or left behind. This book will also direct you to critical, antiracist, and feminist approaches for the field and the modern university more generally—looking to voices and perspectives that have been marginalised for ways to rethink the way we see, and teach, psychology.

The current COVID-19 pandemic has exuberated global geopolitical tensions and led to rising Sinophobia and anti-Asian racism worldwide. At the same time, there has been a nascent Asian diaspora consciousness emerging in the West, celebrating Asian identity and cultural heritage. In the space between anti-Asian racism and Asian Pride, LGBTQ+ people’s voices are largely missing. Can queer Asian diaspora comfortably identify with mainstream Asian diaspora and LGBT politics? Is a queer Asian diaspora cultural politics possible? What would it look like? This book answers these questions by drawing on a range of contemporary case studies from queer Asian diaspora cultural production in recent years including art, performance, film and political activism. Situated at the intersections of queer studies, diaspora studies and Asian Studies, this book articulates an intersectional cultural politics that is anti-racist, decolonial, anti-nationalist, feminist and queer.

Human Growth & Development
Chris Beckett | Hilary Taylor
Our bestselling social work textbook is back again. Taking you right back to basics, this book explains and analyses key theories in a really accessible way before going on to discuss, in detail, how theory can be incorporated into every day social work practice. Each chapter contains activities with step-by-step commentaries for discussion, self-analysis and critical reflection. The book very loosely follows the shape of a human life, beginning with a birth and ending with a death, but many of the chapters deal with ideas and topics that are relevant at many different stages of life, such as bereavement, attachment and learning. Its focus throughout is on psychosocial development - so psychological development within a social context - rather than physical development.

Debbie Haski-Leventhal

Issues in Global Business
Selections from SAGE Business Researcher

Sage Publishing

In 2020, COVID-19 starkly demonstrated the global interconnectedness of business, as it disrupted supply chains and manufacturing operations, broadly shuttered retail stores, and led to restrictions on movement and travel around the world. Other events in 2019 also showcased the undeniable globalization of business, be it from the (un)expected ramifications of Brexit to the impacts of data breaches across various industries. Riots in Hong Kong over an extradition bill also sparked huge debate and controversy, and the U.S.-China trade war also caused concern. All of these events may have largely and immediately impacted one region, yet effects reverberate across larger swathes of the globe—ultimately affecting vast areas, industries, and sectors across the international landscape. Issues in Global Business explores all of these and more, across a wide range of topics, including the on-demand economy, global manufacturing, Bitcoin, data security, and many more.

**The SAGE Encyclopedia of Leadership Studies**

Georgia J. Sørensen | George R. Goethals | Scott T. Allison

Leadership Studies is a multi-disciplinary academic exploration of the various aspects of how people get along, and how together they get things done. The fields that contribute to leadership studies include history, political science, psychology, anthropology, sociology, philosophy, literature, and behavioral economics. Leadership Studies is also about the ethical dimensions of human behavior. The discipline considers what leadership has been in the past (the historical view), what leadership actually looks like in the present (principally from the perspectives of the behavioral sciences and political science), and what leadership should be (the ethical perspective). The *SAGE Encyclopedia of Leadership Studies* will present both key concepts and research illuminating leadership and many of the most important events in human history that reveal the nuances of leadership, good and bad.

Young Children’s Health and Wellbeing
From Birth to 11
Helen Cazaly

This book supports those training to work with young children to explore the many factors that impact on child health and wellbeing. Health is a concept that is often taken for granted in young children. If a child is physically active, appears well and is succeeding in learning, it is assumed that all is well. The growing statistics of child mental health issues tell a different story, as do the statistics for childhood obesity and the increasing number of physical health issues in childhood. This book explores and evaluates the strategies currently used in Britain to tackle this escalating situation and asks - what more is needed? The global pandemic has created a large increase in all childhood issues – the scale of which is yet to be ascertained. Supporting healthy childhoods has always been, and always will be, a constantly evolving agenda. What supported children 10 years ago may no longer be relevant in today’s society.

Populism Versus the New Globalization

Barrie Axford

Populism and globalization are shorthand for the temper of our times. Populism is usually cast as globalization’s nemesis, a backlash against worldwide connectivity, while globalization is often said to be in retreat or even demise. This book takes issue with both interpretations, claiming instead that while populism of all shades tends to be anti-globalist, the globalization it is pitted against has changed dramatically in recent years and is increasingly decreted, destabilized, contingent, multiversal, and multidirectional. Axford paints a picture of this new globalization and dissects the strains of postmodern populism that both contest it and are its expression. Attention to the current surge of populism also affords purchase on an axial feature of our turbulent and globalized world—the imbrication or antithesis of local and global, of difference and sameness. This is an interdisciplinary examination of populism as a factor in global change, drawing on international politics, sociology, and global studies.

What Do We Know and What Should We Do About the Irish Border?

Katy Hayward

The Irish border is a manifestation of the relationship between Britain and Ireland. When that relationship has been tense, we have seen the worst effects at the Irish border in the form of violence, controls and barriers. When the relationship has been good, the Irish border has become - to all intents and purposes - open, invisible and criss-crossed with connections. Throughout its short existence, the symbolism of the border has remained just as important as its practical impact. With the UK's exit from the European Union, the challenge of managing the Irish border as a source and a symbol of British-Irish difference became an international concern. The solution found in the UK-EU Withdrawal Agreement gives the Irish border a globally unique status. A century after partition, and as we enter the post-Brexit era, this book considers what we should know and do about this highly complex and ever-contested boundary line.

Packed with robust country descriptions from regional specialists, the Eighth Edition enables students to think critically about these questions and make meaningful cross-national comparisons.

Shaping the Developing World

The West, the South, and the Natural World

Andy Baker

This interdisciplinary book also describes the social, political, and economic aspects of development and is relevant to students in political science, international studies, geography, sociology, economics, gender studies, and anthropology. The Second Edition has been updated to include the most recent development statistics and to incorporate topics like climate change, democratization, religion and prosperity, the resource curse, and more.

The Muslim, State, and Mind
Psychology in Times of Islamophobia
Tarek Younis

Mental health is positioned as the cure-all for society’s discontentments, from pandemics to terrorism. But psychology and psychiatry are not apolitical, and neither are Muslims. This book unpacks where the politics of the psy-disciplines and the politics of Muslims overlaps, demonstrating how psychological theories and practices serve State interests and perpetuate inequality—especially racism and Islamophobia. Viewing the psy-disciplines from the margins, this book illustrates how these necessarily serve the State in the production of loyal, low-risk and productive citizens, offering a modern discussion of three paradigms underlying the psy-disciplines: neoliberalism, security and the politics of mental health.

Alicia Swords

Social Change: Movements, Politics, and Technology is a text-reader that examines social change processes in the United States in global and historical context. It is distinctive among social change texts because it examines competing strategies of social change, connecting experiences of social movement leaders and participants with larger political-economic processes. Each chapter spotlights a field of historical conflict that generated epoch-making social changes, and the actors who sought and resisted change: settlers, plantation owners, factory and mine owners, bankers and hedge fund managers, indigenous people, abolitionists, people of color, the employed and unemployed, homeless people, youth, welfare mothers, LGBTQIA activists, feminists, and people with disabilities, intellectuals, philanthropists, religious leaders, etc. At the end of each chapter, the author will recommend two primary source documents for further study that provide narrative accounts of social movements that served as significant change agents.

Classical Sociological Theory
Founding Myths, Lost Voices, and Hidden Histories
Jocelyn Viterna | Hanna Katz | Derek J. Roby

The text will offer a different origin story for sociology. While starting where other texts do—with the works of Marx, Durkheim, and Weber—it will give new historical context for understanding how these theorists became canonized decades later as sociology’s “founders.” Based on a close examination of sociology’s earliest records, it will show how many 19th and early 20th century sociologists in the U.S. as well as Europe were actually preoccupied with other historical and social forces—particularly the spread of Western colonialism, and popular ideas from other sciences about social evolution, “natural laws,” and racial hierarchy that were used to justify colonial ambition.

Dawne M. Mouzon

This is a text for undergraduate courses health disparities in the U.S. Typical course names include Health and Inequality, Health Disparities, Minority Populations and Health. Although it will discuss a range of social identities and statuses, the main focus will be on race and ethnicity, the two “master” statuses that tend to structure patterns of health and illness across the lifespan. The text will address a range of issues typically covered in these courses: • How do systems of power (such as racism, sexism, and anti-immigrant hostility) produce poor health outcomes for vulnerable communities? • How does chronic stress shape biological risk factors for health and illness? • What are the major health problems and patterns experienced by different racial/ethnic groups in the U.S.? • How have historical forces and government policies contributed to contemporary health problems and disparities? The text will take a population-based approach. After a series of opening chapters that establish the key theories, methods, and concepts used in this field, the author will investigate four major U.S. minority groups: non-Hispanic Blacks, Hispanic/Latinx Americans, American Indians/Alaska Natives, and Asian Americans.

Consuming Crisis

Francesca Sobande

Consuming Crisis is a crucial account of how consumer culture capitalized on Coronavirus (COVID-19). Sobande explores how brands claim to care while they encourage people to ‘keep calm and consume’. This critical analysis of the power and politics of marketing examines an eclectic mix of campaigns, content, and experiences. Such work outlines the societal significance of fast-fashion adverts, banana bread’s pandemic ‘moment’, university social media strategies, and how digital technology mediates memories and work. Based on the belief that brands cannot be activists, Sobande creatively considers how brands construct care, camaraderie, culture, and so-called ‘normal’ life during times of crisis.

What Do We Know and What Should We Do About Fake News?

Nick Anstead

Voters need to be informed to make political decisions, but what if their media diet not only prevents them from getting the information they need, but actively shapes inaccurate perceptions of the world? Drawing on examples and evidence from around the world, this book aims to make a timely intervention to the debate about the concept of fake news. Its underlying argument will have three objectives. First, to offer more precise definitions for a term that is often loosely used. Second, to offer a less technologically deterministic view of fake news. New social media platforms, such as Facebook and WhatsApp, are clearly an important part of the story, but they exist in wider social, political and institutional settings. Third, to situate the idea of fake news (and our concern about it) in broader arguments about an ongoing crisis and loss of confidence in liberal democratic institutions. Only with this perspective, it will be argued, can we possibly address the question of what we should do about fake news.

Social Psychology

Individuals, Interaction, and Inequality

Karen A. Hegtvedt | Cathryn Johnson

Social Psychology takes a sociological approach to the study of the individual in relationship to society. It’s main purpose is to highlight how social psychology provides varied, yet inter-related, explanations for individuals’ experiences in groups. The text tells the story of how these dynamics unfold, beginning with the central social characteristics of the individual, to processes of perception and of interaction. In the telling of this story, it also notes some of the interesting cross-cultural comparisons in regard to these dynamics.

The Engaged Sociologist

Connecting the Classroom to the Community

Jonathan M. White | Shelley K. White

This concise text carries the public sociology movement into the introductory sociology classroom. While teaching students to think sociologically and to develop a sociological eye, it also demonstrates how sociology can be used as a tool for improving society. As they explain the discipline’s basic theories and concepts, the authors provide many examples of “engaged” sociologists who are working to solve some of society’s most intractable problems. Through a number of exercises and projects in every chapter, students are encouraged to become engaged in their own communities. The authors put their own commitment to public sociology into action by donating 10% of their royalties to a non-profit organization that works to alleviate social injustice.

Killer Cities

Nigel Thrift

*Killer Cities* uses a combination of social theory, polemic and close attention to empirical detail to tell the story of how and why cities cause mass animal death and, in the process, hasten the destruction of the planet. This book is not just a lament, however. It is an attempt to navigate out of this mess of planned and unplanned violence towards a world in which cities no longer act as killers but become aligned with the lives of other beings. It offers pragmatic ways of diminishing the death toll and changing mindsets without ever minimizing the dilemmas that inevitably will have to be faced. *Killer Cities* can be rehabilitated so that they offer brighter paths towards the future - for animals, for human beings, and for the planet. A new urban geography could be within our grasp. Indeed, it has to be, for all of our sakes.

Race, Culture and Media

Anamik Saha

How do media ‘make’ race? How do legacies of empire shape our understandings of race and media? How does racism structure the media industries? Is the internet an inherently white space? Understanding the relationship between race, culture and media has never been more important. From the demonisation of Muslims to rampant new forms of racism on digital platforms, media are central to understanding how race is both constructed and experienced in everyday life. Yet media are key to resisting racism, too. While they can silence and stereotype us, they can also enable us to cut across difference, to contest and mobilise, and to create genuine community. *Race, Culture and Media* is a critical, impassioned and accessible exploration of this complex relationship. Anamik Saha outlines the theories, concepts and research you need to know in order to make sense of race, culture and media today - challenging you to move beyond simplistic notions of “diversity” to really engage with issues of both power and participation. It is essential reading for students and researchers across media, communication and cultural studies.

Media and Society
Power, Platforms, and Participation
Nicholas Carah

How do media platforms organise social life? How do media empower or disempower our identities? How do we understand the impact of algorithms? How are media audiences produced and managed? Media and Society introduces the role of the media in social, cultural, political and economic life, unpacking the increasing entanglement of digital media technology with our everyday lives. It explores the relationship between meaning and power in an age of participatory culture, social media and digital platforms. An age where we both create and consume content, and where we both give and gain attention – translating our social lives into huge flows of data. Associate Professor Nicholas Carah shows how a critical approach to power helps us not only to understand the role media play in shaping the social, but also how we can become critically informed media citizens ourselves, able to participate and be heard in meaningful ways. Evaluating Program Effectiveness

Validity and Decision-Making in Outcome Evaluation

Marc T. Braverman

The book shows how to apply validity concepts when planning and conducting an evaluation, thereby making sure that the evaluation stays true to the purposes for which it was initiated. Marc T. Braverman demonstrates that evaluating with validity means being able to answer the evaluation questions in a way that is useful, accurate, and reflective of the information needed from the evaluation. His approach is practical, with the goal of helping evaluators to conduct high-quality outcome evaluations, and he illustrates concepts with case study examples drawn from studies of intervention effectiveness over many years. The book begins by looking at the ways that validity is conceptualized and the uses to which it is put. Subsequent chapters analyze separate phases of the outcome evaluation process and the critical decisions about design and analysis that are typically required.

Systems-Oriented Evaluation

Beverly A. Parsons | Katie Winters

Many in the field of evaluation have been focused on incorporating a richer systems orientation to evaluation over the last decade. The simple, mechanistic model of systems that has been underlying evaluation no longer represents the reality of today’s complex and rapidly changing world. Progress on incorporating a rich systems orientation has been slow, because the focus has been heavy on theory with not enough on practice, and also many different systems theories exist, creating confusion about what concepts are best suited for evaluation work. This book is designed to address these concerns. It begins with a focus on practice by embedding systems theories into a set of example situations that help the reader link practice and theory: these chapters provide a guided tour of five locations where people are using systems concepts in their particular evaluation situation. These examples put the focus on the overarching features of any systems theory to ground the reader in these general systems concepts. The authors then turn to eight groupings of systems theories to help the reader delve into the differences and see their relevance to evaluation. The book also relates system-oriented evaluation to the various evaluation orientations in use including culturally responsive, empowerment, democratic, developmental, development, formative, summative, and realistic evaluation.

Mixed Methods Research

Moments and Opportunities

Lisa D. Pearce

The field of mixed-methods research has been well-covered in recent years, with several 300–400 page volumes offering in-depth and comprehensive coverage of the subject. What is missing at the moment is a very concise supplement to general research methods courses or companion to a short course. This type of very short book could serve as an entry point, conveying the mixed research approach in a nutshell and serving as a conduit to other more comprehensive treatments. Rather than outlining every possible rationale, design, procedure, or evaluation method, this volume will highlight a handful of “moments” in the research process where mixed methods research is possible and potentially transformative. Throughout the book, the author refers readers to the more comprehensive or specialized texts, but keeps her focus on four key moments and examples of how researchers have harnessed a mix of methods to produce rich evidence regarding important social processes. It will demonstrate how quantitative data (the focus of the QASS series) can be used in integration with qualitative data to advance a line of research.

Sharon L. Nichols | Paul A. Schutz | Sofia Bahena

This text helps students learn how to select, read, understand, and evaluate the research they read. Many texts focus on the process of conducting research and not as much on how students in applied disciplines can assess and apply that research in their future professional lives; this text aims to fill that gap. Organized in the same way as a research article, the book includes a chapter on literature reviews and research questions, followed by three methods chapters (quantitative, qualitative, and mixed methods), and a chapter on research conclusions and implications. The book includes a wealth of pedagogical features including Learning Objectives, Check Your Understanding questions, a Guided Application exercise in each chapter, suggested further reading, and a glossary. Three research articles, used as exemplars throughout, are included in the appendix to the book.

Writing and Representing Qualitative Research
Maria K. E. Lahman

This book addresses foundational areas of qualitative writing (such as journal articles and dissertations), aesthetic representations (including poetry and autoethnography), publishing, and reflexivity in representation in one practical and engaging text based on real experiences. Author Maria K.E. Lahman draws on her experiences as a qualitative research professor and writing instructor, and as someone who has published widely in scholarly journals, employing both traditional and more innovative forms of writing. The first part of the book covers writing tips; how to represent data; how to write a qualitative thematic journal article; how to write a qualitative dissertation; and provides guidance on the publication process. The second part encourages the qualitative researcher to move beyond traditional forms of writing and consider how qualitative research can be represented more aesthetically: as poems, autoethnographies, and visually. The book concludes with a chapter on reflexivity in research representations. Throughout, the author provides vivid examples from her own work, and that of graduate students and colleagues.

Evidence-Building and Evaluation in Government

Kathryn Newcomer | Nicholas Hart

Public managers, contractors, and grantees conducting evaluations for government operate in a complex environment where policymakers and commissioners of evaluation expect different types of “evidence” and simultaneously employ different criteria in judging the quality of that evidence. Evidence-Building and Evaluation in Government provides a road map for evaluators doing business within or for government, and public managers who are expected to assess and use evidence generated by a large variety of evaluation approaches. The book provides checklists and how-to guidance to help students and other readers develop skills in important activities such as: assessing the quality of evidence claims; developing theories of change to guide decision-making; and increasing the support of public leaders and executives in the generation and use of evidence to inform their decision-making.

Crafting Qualitative Research Questions

A Prequel to Design

Elizabeth (Betsy) A. Baker

The essence of research design is the ability to articulate your research question. The research question is the precursor to the study, and a well-crafted question encapsulates all of the design elements for that study. Based on more than 20 years of conducting research, collaborating with colleagues to formulate research projects, and experience advising doctoral students, author Dr. Elizabeth (Betsy) A. Baker forged a research design heuristic which she introduces in Crafting Qualitative Research Questions: A Prequel to Design. She starts by dissecting the anatomy of a qualitative research question, outlines the role of paradigms in research design, describes strategies to use the anatomy as a design heuristic, and provides sample cases that track the decisions two researchers made while formulating a qualitative question. The book concludes with advice on how to move from the research question to the proposal. Throughout, the author provides handy worksheets that readers can complete as they work on crafting their own research question.

Introduction to Cognitive Ethnography and Systematic Field Work

G. Mark Schoepfle

Introduction to Cognitive Ethnography and Systematic Field Work by G. Mark Schoepfle provides a guide to the fundamentals of cognitive ethnography for qualitative research. A focus of this technique is collecting data from flexible but rigorous interviews. These interviews are flexible because they are designed to be structured around the semantic knowledge being elicited from the speaker, not around some pre-conceived design that is based on the researcher’s background, and they are rigorous because the basic linguistic and semantic structures are shared among all cultures. Written by one of the founders of this technique, this text provides a wealth of concentrated knowledge developed over years to best suit this collaborative and participant-centric research process. Eight chapters show how intertwined data collection and analysis are in this method.

Doing Qualitative Research in a Digital World

Jessica N. Lester | Trena M. Paulus

While some qualitative methods texts touch upon online communities as a potential data source, show how to conduct interviews and focus groups online, or select recording devices and analysis software, no book to date has guided readers in the creation of a comprehensive digital workflow for their research. By working through each chapter in this book, readers will be able to generate a unique digital workflow for designing and implementing their research. The book provides a deep exploration of the relationship between theories of technology, substantive theories, and methodological theory, and shows how together these inform the development of a quality research design.

Developing Effective Research Proposals

Keith F Punch | Alis Oancea

The motivation for updating the text is to mitigate any decline in sales by ensuring that it is meeting the needs of today's students and researchers. Obviously with such a successful text, we want to retain all of the great content and features which make it so popular. Therefore the proposed updates are fairly light, but I think that along with a new fresh text design, it should be effective in lifting the book and keeping it current. New to this edition: * New chapter on ethics: an essential part of the research proposal * Clear explanation of different between method and methodology * New section on mixed methods: a common approach * New advice on how to write a method and methodology and strengthen this section of the research proposal * More exercises and activities, now for each key chapter * Fresh, modern, eye-catching new text design * much better for readability

Qualitative Inquiry and Research Design

Choosing Among Five Approaches

John W. Creswell | Cheryl N. Poth

In this Fifth Edition of the bestselling text (popularly known as the “five approaches book”) John W. Creswell and co-author Cheryl N. Poth explore the philosophical underpinnings, history, and key elements of each of the five qualitative inquiry traditions: narrative research, phenomenology, grounded theory, ethnography, and case study, putting them side by side so that we can see the differences. In an accessible writing style, the authors relate research designs to each of the traditions of inquiry. They compare theoretical frameworks, ways to employ standards of quality, and strategies for writing introductions to studies, collecting data, analyzing data, writing a narrative, and verifying results. New to this edition are more in-depth discussions of intersectionality and posituality in research, updated exemplars and examples from a wide range of diverse scholars, and more coverage of qualitative data analysis and techniques.

Practical Multilevel Modeling Using R

Francis L. Huang

This book provides students with a step-by-step guide for running their own multilevel analyses. Detailed examples illustrate the conceptual and statistical issues that multilevel modeling addresses in a way that is clear and relevant to students in applied disciplines. Clearly annotated R syntax illustrates how multilevel modeling (MLM) can be used, and real-world examples show why and how modeling decisions can affect results. The book covers all the basics but also important advanced topics such as diagnostics, detecting and handling heteroscedasticity, and missing data handling methods. Unlike other detailed texts on MLM which are written at a very high level, this text with its applied focus and use of R software to run the analyses is much more suitable for students who have substantive research areas but are not training to be methodologists or statisticians. Each chapter concludes with a “Test Yourself” section, and solutions are available on the instructor website for the book. A companion R package is available for use with this text.

Leading Change Through Evaluation

Improvement Science in Action

Kristen L. Rohanna

Evaluators who are interested in developing or improving a program or policy frequently look to formative evaluation as a guiding framework. This book shows why those hoping to use evaluation to drive change in complex systems, rather than develop or improve one program, policy, or product, need to shift from the oversimplified idea of formative evaluation to a more specified continuous improvement model grounded in improvement science. In doing so, author Kristen L. Rohanna provides guidance to both evaluators and others, such as K-12 educators or hospital administrators, who lead improvement initiatives in their organizations and seek to solve persistent problems of practice. The book includes an extended case study: a networked improvement community of five public middle and high schools.

Recurrence-Based Analyses

Giuseppe Leonardi | Sebastian Wallot

Recurrence-based analysis is a form of nonlinear correlational analysis that is used to analyze time series data. It quantifies the number and duration of recurrences of a dynamical system in time and place. This book guides readers in selecting the appropriate analysis technique for solving their data analysis problem. It provides a discussion of the theoretical background of Recurrence Plots (RP) and Recurrence Quantification Analysis (RQA), which form the basis of several other types of analysis (also treated in the book), and of their potential applications for research questions arising in the social sciences. It will be of interest to students and researchers of complex systems or nonlinear dynamical systems in such areas as psychology, political science, sociology, organizational behavior, information science, and systems science. R code and data to replicate the examples are provided on an accompanying website.

An Introduction to Reproducible Research for Social Scientists

Jenine K. Harris

Research is reproducible when the data and software are accessible, and the data management and analysis steps are clear and complete. While some reproducible research practices have become more common, there is a notable lack of widespread adoption of many of these practices due to the lack of knowledge and skills. This book seeks to fill that gap. Throughout the book, the author avoids jargon wherever possible and uses clear, real-world examples on topics relevant to student interests (e.g., voting rights, social media usage, and income inequality).

Donileen R. Loseke
Narrative research is an increasingly popular qualitative method across the social sciences. Narrative as Topic and Method in Social Research has two purposes: firstly to show students and researchers how to do research on narrative topics, particularly on questions about narrative productions of meaning, and secondly to explain some fundamentals of research methods suitable for exploring these topics. In a final part of the book, author Donileen R. Loseke provides empirical examples of how such research is done. These chapters use small amounts of data to examine the analytic tasks of designing research questions, finding appropriate data, sampling decisions, contextualization, data categorization, and communicating study findings.

Longitudinal Network Models
Scott Duxbury

Although longitudinal social network data are increasingly collected, there are few guides on how to navigate the range of available tools for longitudinal network analysis. The applied social scientist is left to wonder: Which model is most appropriate for my data? How should I get started with this modeling strategy? And how do I know if my model is any good? This book answers these questions. Author Scott Duxbury assumes that the reader is familiar with network measurement, description, and notation, and is versed in regression analysis, but is likely unfamiliar with statistical network methods. The goal of the book is to guide readers towards choosing, applying, assessing, and interpreting a longitudinal network model, and each chapter is organized with a specific data structure or research question in mind. A companion website includes data and R code to replicate the examples in the book.

An Introduction to Penology: Punishment, Prisons and Probation
Lawrence Burke | Dr Helena Gosling

An Introduction to Penology is a concise, informative, scholarly guide that will speak to a variety of audiences interested in how the notion of punishment plays out in community and custodial settings with people who have broken the law. With a particular focus on prisons and probation, the book provides an opportunity for readers to critically engage with the concept of punishment (in theory and practice) and consider different ways in which we, as a society, can respond to lawbreaking. The text will allow students to pursue a more in-depth study of two of the main criminal justice institutions through the lens of their organisational structures, cultures, service delivery and responses to the needs of minority and vulnerable groups. Throughout the text, students will be encouraged to critically engage with longstanding penological debates taking into consideration the theory, policy and practice of punishment, and will explore ways in which we can rethink penology on an individual and social level and begin to make a case for social justice rather than criminal justice.

Foundations of Inquiry
Linking Paradigms and Methodologies in Social Research
Lucy E. Bailey | Guoping Zhao | Benjamin Bindewald

This text is designed to help students develop an understanding of what a paradigm is and to help them connect paradigms to meaningful research practice. The concept of a ‘research paradigm’ is one that many graduate students find difficult to articulate and apply in their research. Without this competency, research projects often involve disjointed collections of (sometimes incompatible) methodological techniques. This text engages readers with a variety of thoughtful, systematic, and integrated approaches to research design and application, providing helpful tools that can be used to critically engage with the methods of social inquiry and the philosophical foundations that ground and justify their particular applications both inside and outside of the classroom. It also incorporates attention to new developments in inquiry such as Indigenous paradigms, mixed methods, and new materialisms.

An Introduction to Randomized Controlled Trials
Alex Sutherland | James Lawrence

This volume is a practical introduction to randomized controlled trials (RCTs). The book encompasses the theory and practice of RCTs, garnered from the authors’ experience of running trials across a wide range of policy areas. The book includes chapters on experimental design, data handling, analysis, decision making and inference and the use of RCTs in policy. Three things make this volume unique: the breadth of application that the authors can talk to; their everyday application of trial design and analysis that informs the book, and the design and analysis of RCTs (field and online), and the use of RCTs in policy. As a research design, RCTs are ubiquitous. They are used increasingly to assess the value of any kind of intervention, be it an educational programme, an anti-poverty initiative, a new drug, a new technology or a new policy. The question of whether a particular intervention makes a difference is deeply relevant to researchers and practitioners in a variety of fields. This book will take readers through the text analysis process, from text mining and pre-processing the text to final analysis. It includes two major case studies using historical and more contemporary text data to demonstrate the practical applications of these methods. What Do We Know and What Should We Do About Slavery?
Julia O’Connell Davidson

Slavery is a live issue today, but the people who talk about it as such are not all of a piece. Some insist the world is now plagued by the contemporary equivalent of transatlantic slavery, and call on us to combat “modern slavery”. Others hold that the on-going devaluation and destruction of black life continues the logic of transatlantic slavery. They urge us to address the “afterlives” of racial chattel slavery. These two groupings provide different answers to the questions, “what do we know and what should we do about slavery?” This book reviews what is known about the issues at the heart of each perspective, and argues that the concept of “afterlives” is more helpful than that of “modern slavery” to those seeking to challenge injustice, violence, inequality and oppression in the twenty-first century.

The Myth of Measurement
Inspection, Audit, Targets and the Public Sector

Nick Frost

In the public sector inspection regimes and performance targets provide a powerful and dominant narrative, often placing pressure on professionals and organisations to continuously quantify the quality of services and to achieve targets. This book explores the background, development, techniques and impact of such regimes across areas of the public sector including schools, universities, police forces, children's services and health services. Putting inspection and audit regimes under scrutiny, the author questions their role and function across these organisations and builds a persuasive critical argument for the re-thinking of public accountability mechanisms and techniques.

Frameworks of Power
Stewart R. Clegg

Frameworks of Power is a coherent and comprehensive account of the different frameworks for understanding power that have been advanced by influential thinkers across the social sciences. A true classic in the field, this revised edition provides an influential and a major point of reference for scholars at all levels concerned with power. Looking back to the classical literature on power, with special emphasis on Machiavelli and Hobbes, the book concentrates on the analysis of power - from both British and American social and political theorists, and from German Critical Theory and French theorists such as Foucault - and develops upon its theory and its application. The second edition includes a completely new chapter, A History of the Present, which offers a timely, engaging and provocative intervention by analysing three contemporary crises - the COVID-19 pandemic, Russia's invasion of Ukraine and climate change - using the circuits of power framework that was the central concept of the original work.

Questioning Gender
A Sociological Exploration
Robyn Ryle

Questioning Gender: A Sociological Exploration serves as a point-of-departure for productive conversations and questions about gender and as a resource for exploring answers to many of those questions. Rather than providing definitive answers, this book takes a global approach and aims to challenge students' preconceptions about gender and to demonstrate how gender as a system creates and reinforces inequality. Author Robyn Ryle uses both historical and cross-cultural approaches to help students understand the socially constructed nature of gender. With a focus on contemporary topics, including the #MeToo movement, sexual harassment in the workplace, and the gender wage gap, students will be prompted to think critically about past, present, and future gender-related issues.

What Do We Know and What Should We Do About AI?
Ewa Luger

The idea of Artificial Intelligence (AI) has taken the world by storm. From fears over killer robots in sci-fi dystopias, to driverless cars in real life, we are both inspired and horrified by the prospect of an advanced intelligence that is not our own. Could AI take over the world? Will it take all of our jobs? Has Google really created a sentient chatbot, and is AI racing towards human intelligence, or is it just horribly misunderstood? These common questions point us towards an unknown and troubling future. What we do know is that we are in the midst of a hype cycle, with huge amounts of funding and focus galvanising progress. Whether AI truly lives up to this hype remains to be seen, but this once niche idea has suddenly evolved into a global multibillion dollar industry. In this short and accessible book, Ewa Luger explains what we mean when we talk about AI, explores how we got here, describes what we are doing about it, where the field is heading, and where we should go next.

Multilevel Structural Equation Models
Oi-Man Kwok | Ehri Ryu | Mark Lai

Data in the social sciences are becoming more complex. As a result, researchers, as well as journal editors and reviewers, are more aware of the importance of adequate modeling of the data dependencies in multilevel data. Multilevel structural equation models (MSEM) are a hybrid of multilevel models and structural equation models; they offer flexibility in analyzing multilevel data by simultaneously modeling both latent and observed variables. This text offers a practitioner-oriented, hands-on approach to understanding how to work with these models, along with many applied examples from disciplines such as business, education, and health research. Syntax in corresponding software such as Mplus and Stata, and output files will be provided on an accompanying website. Students working through the book will be able to understand the important concepts behind MSEM, as well as be able to apply them to their own analyses, and locate related information and references.

Interpreting and Comparing Effects in Logistic, Probit and Logit Regression
Jacques A. P. Hagenaars | Hans-Jürgen Andress | Steffen Künnel

Log-linear, logit and logistic regression models are the most common ways of analyzing data when (at least) the dependent variable is categorical. This volume shows how to compare coefficient estimates from regression models for categorical dependent variables in three typical research situations: • within one model, • between identical models estimated in different subgroups, and • between nested models. Each of these three kinds of comparisons brings along its own particular form of comparison problems. Further, in all three areas, the precise nature of comparison problems in logistic regression depends on how the logistic regression model is looked at and how the effects of the independent variables are computed. This volume presents a practical, unified treatment of these problems, and discusses the advantages and disadvantages of each approach, and when to use them, so that applied researchers can make the best choice related to their research problem.

Applied Bayesian Statistics
Scott M. Lynch

Bayesian statistical analyses have become increasingly common over the last two decades. The rapid increase in computing power that facilitated their implementation coincided with major changes in the research interests of, and data availability for, social scientists. Specifically, the last two decades have seen an increase in the availability of panel data sets, other hierarchically structured data sets including spatially organized data, along with interests in life course processes and the influence of context on individual behavior and outcomes. The Bayesian approach to statistics is well-suited for these types of data and research questions. *Applied Bayesian Statistics* is an introduction to these methods that is geared toward social scientists. Author Scott M. Lynch makes the material accessible by emphasizing application more than theory, explaining the math in a step-by-step fashion, and demonstrating the Bayesian approach in analyses of U.S. political trends drawing on data from the General Social Survey.

Understanding Correlation Matrices
Joseph Lee Rodgers | Alexandria Hadd

Correlation matrices (along with their unstandardized counterparts, covariance matrices) underlie the majority the statistical methods that researchers use today. A correlation matrix is more than a matrix filled with correlation coefficients. The value of one correlation in the matrix puts constraints on the values of the others, and the multivariate implications of this statement is a major theme of the volume. Alexandria Hadd and Joseph Lee Rodgers cover many features of correlations matrices including statistical hypothesis tests, their role in factor analysis and structural equation modeling, and graphical approaches. They illustrate the discussion with a wide range of lively examples including correlations between intelligence measured at different ages through adolescence; correlations between country characteristics such as public health expenditures, health life expectancy, and adult mortality; correlations between well-being and state-level vital statistics; correlations between the racial composition of cities and professional sports teams.

Confirmatory Factor Analysis
Shawn Bauldry | J. Micah Roos

Measurement connects theoretical concepts to what is observable in the empirical world, and is fundamental to all social and behavioral research. In this volume, J. Micah Roos and Shawn Bauldry introduce a popular approach to measurement: Confirmatory Factor Analysis (CFA). As the authors explain, CFA is a theoretically informed statistical framework for linking multiple observed variables to latent variables that are not directly measurable. The authors begin by defining terms, introducing notation, and illustrating a wide variety of measurement models with different relationships between latent and observed variables. They proceed to a thorough treatment of model estimation, followed by a discussion of model fit. Most of the volume focuses on measures that approximate continuous variables, but the authors also devote a chapter to categorical indicators.

A Mathematical Primer for Social Statistics

John Fox

A Mathematical Primer for Social Statistics, Second Edition presents mathematics central to learning and understanding statistical methods beyond the introductory level: the basic “language” of matrices and linear algebra and its visual representation, vector geometry; differential and integral calculus; probability theory; common probability distributions; statistical estimation and inference, including likelihood-based and Bayesian methods. The volume concludes by applying mathematical concepts and operations to a familiar case, linear least-squares regression. The Second Edition pays more attention to visualization, including the elliptical geometry of quadratic forms and its application to statistics. It also covers some new topics, such as an introduction to Markov-Chain Monte Carlo methods, which are prominent in modern Bayesian statistics. A companion website includes materials that enable readers to use the R statistical computing environment to reproduce and explore computations and visualizations presented in the text.

Exploring Rating Scale Functioning for Survey Research

Stefanie A. Wind

Items with ordered response categories are common in survey research, such as when respondents are asked how much they agree with certain statements. But how large are the differences between categories of response, and how well do they distinguish between respondents? This volume is the first to introduce the evaluation of rating scales to an audience of survey researchers. Exploring Rating Scale Functioning for Survey Research provides researchers with an overview of rating scale analysis along with practical guidance on how to conduct such analyses with their own survey data. Author Stefanie A. Wind presents three categories of methods: Rasch models; non-Rasch Item Response Theory (IRT) models; and non-parametric models, together with practical examples. Tutorials, datasets, and software code (R and Facets) to accompany the book are available on the book’s website at https://study.sagepub.com/researchmethods/qass/wind-exploring-rating-scale-functioning.

Power, Violence and Justice

Reflections, Responses and Responsibilities

Margaret Abraham

This book brings together sociological insights, theoretical perspectives and global research to contribute to a deeper understanding of the complexities of contemporary power, violence, and justice. It explores a diverse range of urgent topics, including: colonialism, migration, race, gender and intersectionality, social movements, security, environment, and education. In doing so, it asks what the role of sociology is – and could be – in moving us forward. Both critical and hopeful, this collection stimulates us as researchers and as human beings. It challenges us to reflect, respond, and share in the responsibility of countering the forces that perpetrate violence, subvert equality, and dilute the notion of justice. With contributions from an array of distinguished international scholars, including several former International Sociological Association presidents, this is an essential reference work for researchers across the social sciences interested in power, violence, social justice, human rights, public sociology, social change and social movements.
